Dr Jane Leonard provides an overview on how she treats acne in pregnant patients

Complication Claims

Law firm partner Emma Galland discusses types of patient claims and how to manage them

LEADING THE WAY IN HYALURONIC ACID INNOVATION

About IBSA

IBSA is one of the leading pharmaceutical companies in hyaluronic acid production. The in-house production of the raw material allows IBSA to choose the exact molecular weight or combination to support each indication while ensuring purity and safety of their products. SHYALT® (Sodium Hyaluronate Altergon), IBSA's hyaluronic acid, is an ultrapure grade HA, produced through a patented biofermentation process, which ranks worldwide as 'Top High Quality'. Altergon is a FDA approved manufacturing site.

About HA-Derma

HA-Derma is the exclusive UK & Ireland distributor of the IBSA aesthetic portfolio. In addition to the acclaimed injectable brands Profhilo®, Aliaxin® and Viscoderm® Hydrobooster®, HA-Derma also offers the rest of the IBSA portfolio ranging from mesotherapy products (Skinkò and Skinkò E) to oral skin solutions, topical skin treatments and sterile anti-inflammatory post-treatment cover-up.

Training and Excellence

HA-Derma is the only approved and recognised training provider authorised by manufacturer. HA-Derma ensures that delegates have a complete theoretical and practical knowledge of the products and are able to maximise treatment outcome whilst gaining a thorough understanding of the product technology.

Aliaxin®

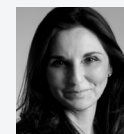

Aliaxin® is IBSA's monophasic dermal filler line which easily integrates into tissue and provides natural, long lasting correction. The different molecular weights and the combination of cross-linked (FL, GP & EV) and natural HA (SR) result in both a biological effect (hydration) and mechanical action (lift) which we refer to as HYDROLIFT® Action. All products have been rheologically tailored to work in harmony for full-face treatment and 3-dimensional facial rejuvenation.

The ALIAXIN® dermal filler line is one of our favourites. Especially for the outstanding product safety and high cohesivity, resulting in a good tissue integration and a natural and long-lasting effect. Patients are surprised about how much their skin has been improved. The short recovery time gives better comfort and patient compliance. The special feature of ALIAXIN SR® is defined by its effect on tissues as a result of its formulation, which includes both natural and cross-linked hyaluronic acid. following the HYDROLIFT® Action concept created by IBSA Italia.

Dr Gabriel Siquier Dameto
Dameto Clinics International, dametoclinics.com

ALIAXIN® is IBSA's monophasic dermal filler line, it contains a combination of well-defined molecular weights to obtain different biological & mechanical effects. Key features of the ALIAXIN® range are high tissue integration and stability resulting in natural but at the same time long-lasting results. ALIAXIN® SR is a remarkable product, there is nothing like it on the market. It is a unique combination of natural and crosslinked HA combining three molecular weights of HA for a more well-rounded blend of HYDROLIFT® Action.
